

NAME :
MATRIC NO : **TOTAL SCORE (/ 25m)**

Write a program that helps a cashier at IIUM bookstore to calculate the total sales of textbooks. In main menu, the program will display a list of books and their prices that have been initially stored in the system. Discount is given to students and it is fixed at 10%.

User needs to input quantities of all three textbooks sold at the bookstore and the program will calculate the sale for each textbook. Lastly it will display total sales, discount amount and nett sales of all textbooks.

```

                                Book Sales System
                                *****

List of textbooks:

Remember, as always....

- use good variable names, declare/use constants where appropriate
- use good formatting (indentation), insert good commenting of codes
- include good prompts, welcoming messages, goodbye messages, etc.

E-mail your source code (.c file) to: **noorazimah_cfs@yahoo.com**
